

The year is over, but the *flu* has not gone away.

If you haven't been vaccinated against the flu, it's not too late! Flu continues to cause illness, hospitalizations and deaths long into the spring.

Remember, even if you got a flu vaccine last season, you should get vaccinated again, since flu vaccines wear off over time and change almost every year.

Make it a resolution in your family to **get vaccinated every year.**

If you don't have a regular health care provider, call 2-1-1 or visit www.publichealth.lacounty.gov to find free or low-cost vaccinations near you.
