Los Angeles County Treatment Cascade among PLWH in Care, 2009

Estimated Number of Persons Living with HIV and AIDS in LAC

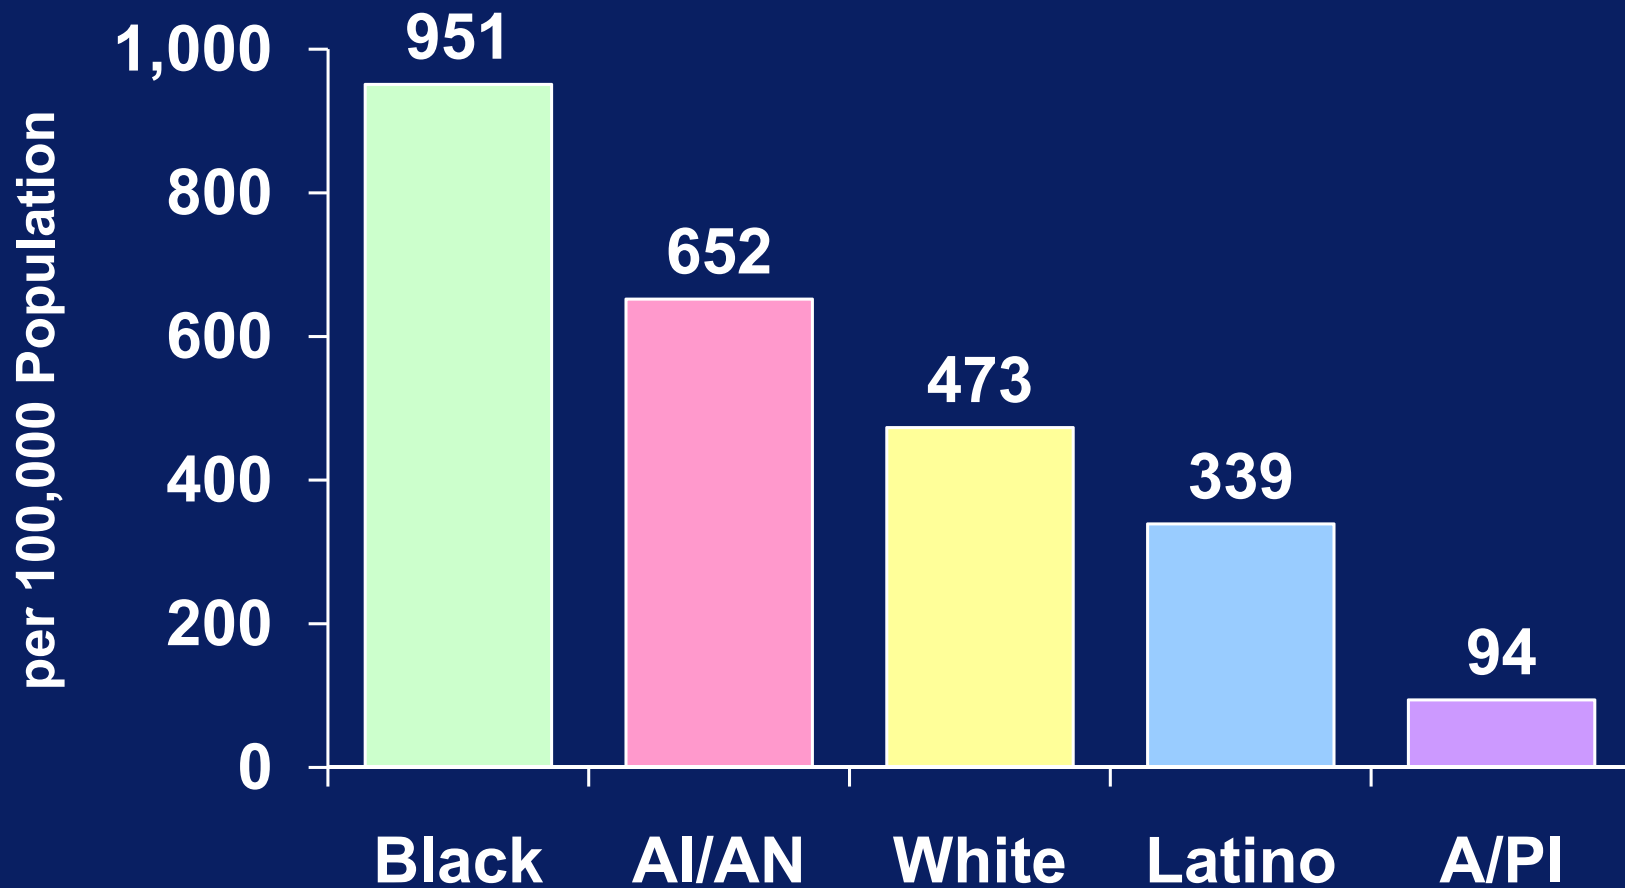

Source: LAC HIV Epidemiology Program, reported as of 12/31/2010.

(1) Estimate that 21.5% of HIV+ in LA County are unaware of their infection (Campsmith et al. 2010).

(2) Of 5,100 notifications pending investigation, estimate 2,200 who have detectable VL to be cases, as well as about 1,000 of the remaining cases.

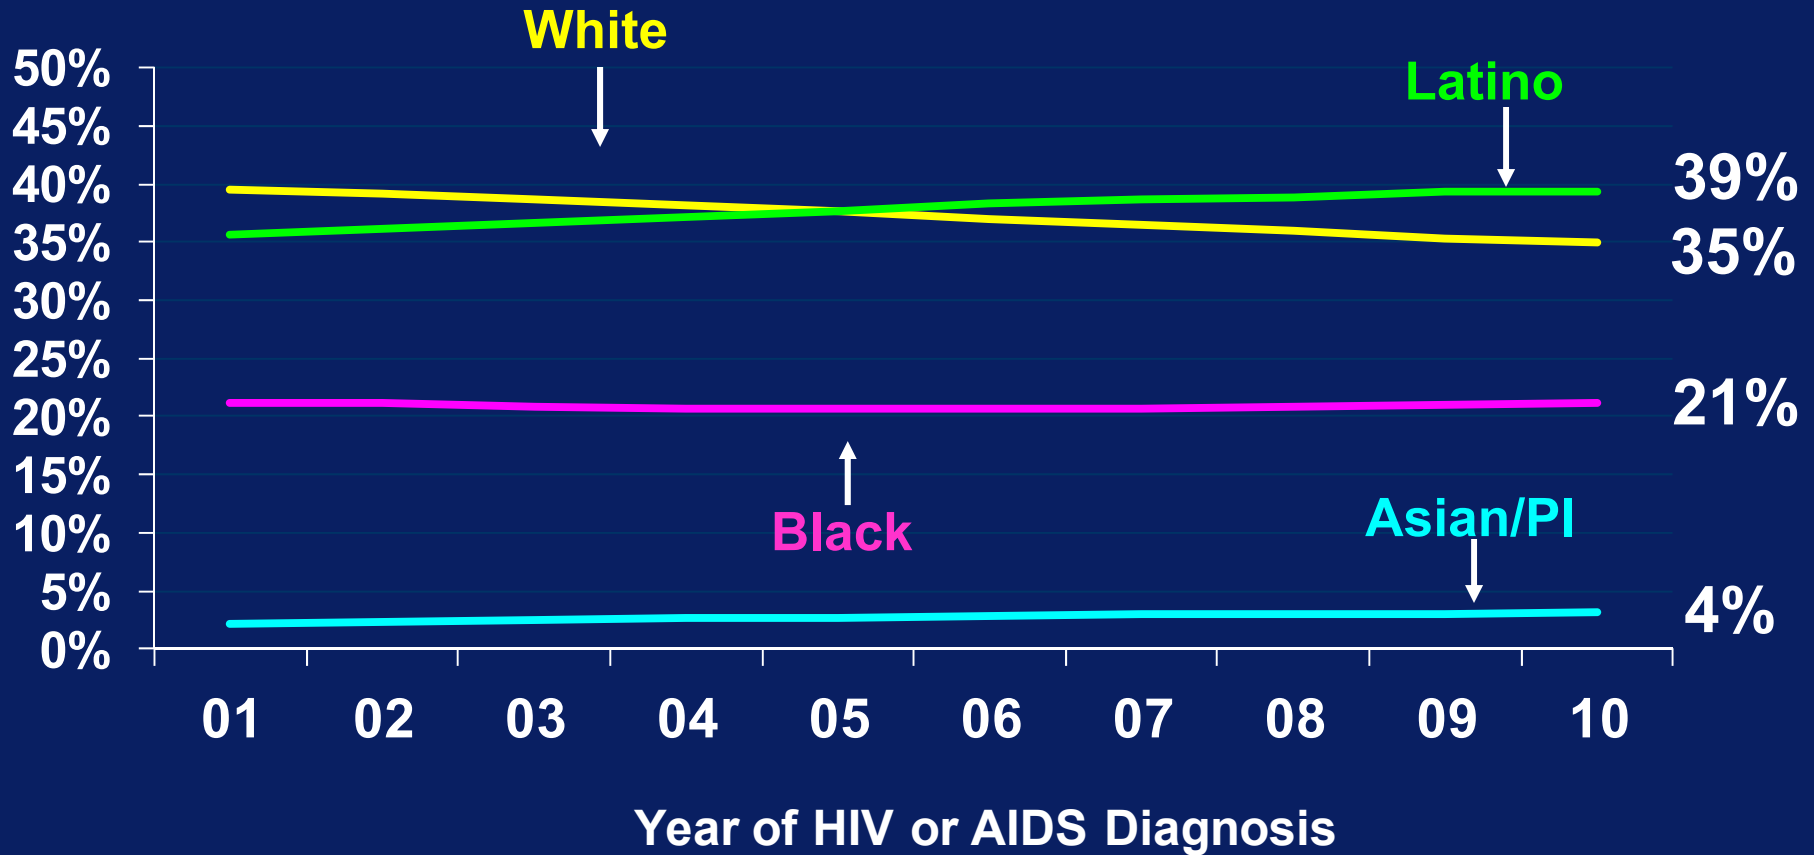

Persons Living with HIV/AIDS in LAC per 100,000 population* by Race/Ethnicity, as of December 2010

*Sometimes called "Prevalence Rate"; it is really a proportion.

Proportion of LAC PLWH/A Cases by Race/Ethnicity* & Diagnosis Year, 2001-10

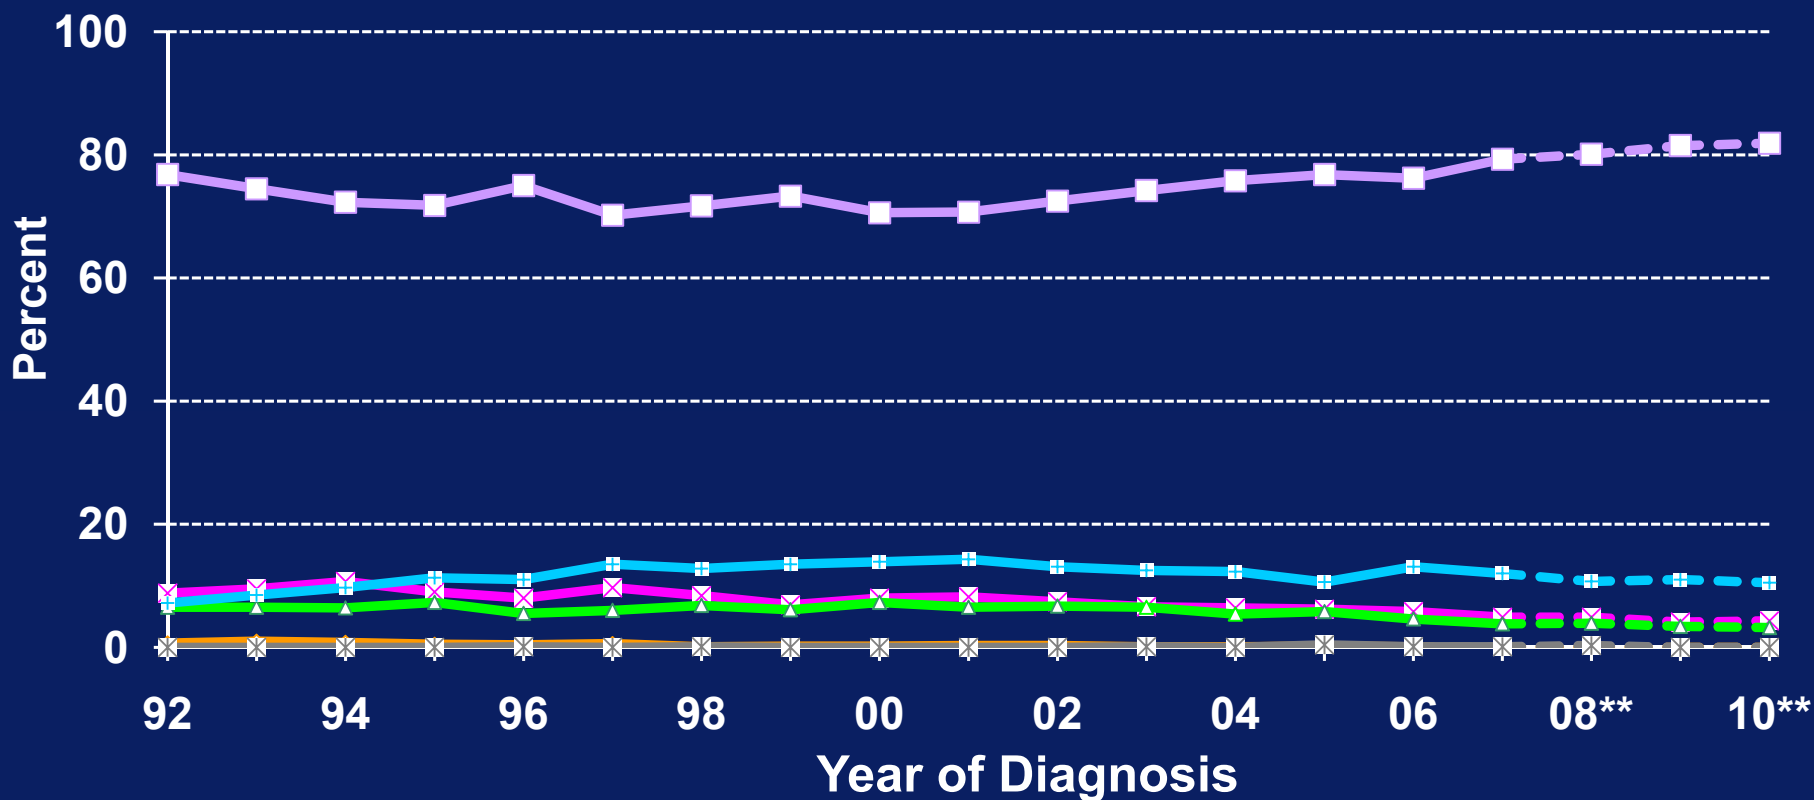

*American Indian and Alaska Native are not presented here but consistently comprise <1% of cases, including 0.4% in 2010.

*Data are provisional due to reporting delay.

 ▲ MSM/IDU
 ■ Heterosexual contact
 ◆ Other*
 ✕ Undetermined

* Persons with an undetermined transmission category are assigned a risk factor using multiple imputation (MI) methods (see technical notes in HIV/AIDS Surveillance Summary). Other risks include hemophilia or coagulation disorder, transfusion recipient, perinatal exposure, and confirmed other risk.

** Data are provisional due to reporting delay.

Not Linked to Care: Demographics

Predictors of Unlinked to Care in LAC

- Multivariate regression model on data from HCT clients who tested positive at a OAPP-funded site from 2006-2008.
- Used unlinked to care as the outcome (dependent variable).
- Independent covariates include:

Race, Age, Gender, Injection Drug Use, MSM, Living Situation, HIV Test Site Type
